COMPANY OVERVIEW

Technical sales & supply in South Korea.

Food & Beverage Filtration / Biopharma

Connect Hive Co., Ltd. is a South Korean technical-products supplier. We combine product selection, technical coordination, supply and customer account management for industrial applications.

CORE MARKETS

Food & Beverage

Clarification, hollow-fiber MF/UF and filtration for beverages, dairy and ingredients.

Beverage clarification
Dairy ultrafiltration
Wastewater membrane filtration

Biopharma

Filtration, membrane separation, single-use assemblies and process measurement for biopharma.

Bags and tubing assemblies
Flow and pressure measurement
Filter integrity testing

HOW WE HELP

Beverage filtration

Filter supply and technical support, including product selection, operating-condition review and customer follow-up.

Biopharma product review

Review equipment fit, the replaceable fluid path and manufacturer documentation against process requirements.

COMPANY FACTS

Founded November 2024
Location Anyang, South Korea
Business registration 872-88-03211

Registered address
Suite 33, 10F, 91, LS-ro 116beon-gil,
Dongan-gu, Anyang-si, Gyeonggi-do,
Republic of Korea

PRODUCT PORTFOLIO & APPLICATION REVIEW

Products for application review.

A functional portfolio for customers comparing options and manufacturers evaluating complementary market opportunities.

PRODUCT FAMILY	PRODUCTS & SUPPORT SCOPE
Filtration & single-use products	Food and beverage process filtration; biopharma filters; single-use bags and assemblies; integrated PUPSIT bags and filter integrity testers; UF/DF guidance.
Membrane separation & dairy UF	Heat-resistant spiral-wound membranes; ceramic membranes for dairy-UF review. Confirm UF grade/MWCO, later processing and final residual lactose. UF alone does not guarantee lactose-free milk.
Gas drying & humidification	Membrane compressed-air dryer; hollow-fiber membrane humidifier. Review flow, pressure, moisture target and integration requirements.
Biopharma process measurement	Single-use ultrasonic and electromagnetic flow measurement, and pressure sensors with a disposable fluid path.

Confirm suitability before selection. Review the actual membrane, wetted materials, cleaning approach and configuration. Biopharma production use requires separate installation-specific suitability and qualification review.

APPLICATION AREAS TO REVIEW

Areas for product-fit and feasibility discussions; not a list of completed installations.

- Food & beverage
- HVAC & facilities
- Industrial water & resource recovery
- Biopharma
- Printing & packaging
- Separation R&D
- Semiconductor & electronics
- Agriculture & storage

MANUFACTURERS & CUSTOMER ENQUIRIES

A practical partnership. A clear enquiry.

We welcome manufacturers exploring a Korean sales and distribution partnership, as well as defined account-management roles within an existing sales network. Product scope, market coverage and responsibilities are agreed together.

01 Market development

Identify target applications, approach suitable customers and coordinate introductory meetings.

02 Technical coordination

Collect requirements, coordinate samples and evaluations, and support product selection with the manufacturer.

03 Sales & account management

Follow up on quotations, coordinate orders and delivery, and maintain local customer communication.

04 Project support

Coordinate agreed project information and documentation needs, including relevant FAT/SAT support.

USEFUL ENQUIRY INPUTS

Process or membrane enquiry
Feed and target outcome; flow and pressure; temperature; membrane or filter requirements; wetted materials; cleaning method; evaluation scale.

Biopharma process enquiry
Equipment and process step; batch size; flow and pressure range; existing bags or tubing; required documents.
